

SUMMARY OF DD FIELD OBSERVATIONS

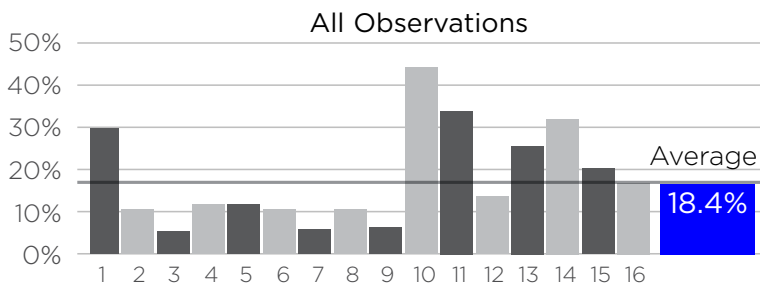

NUTRITIONAL STRATEGY

An innovative nutritional strategy that included Availa® Plus was tested at 16 production sites across the U.S., covering most major dairy-producing states. The prevalence of digital dermatitis (DD) was noted on the first day of feeding, and then again at 80 and 150 days. Herds observed ranged in size from 200 to 1750 heifers.

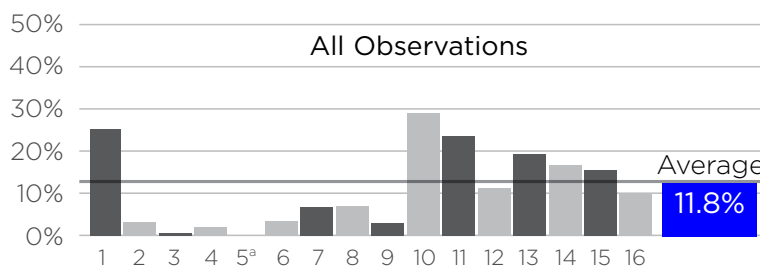

Digital Dermatitis Prevalence

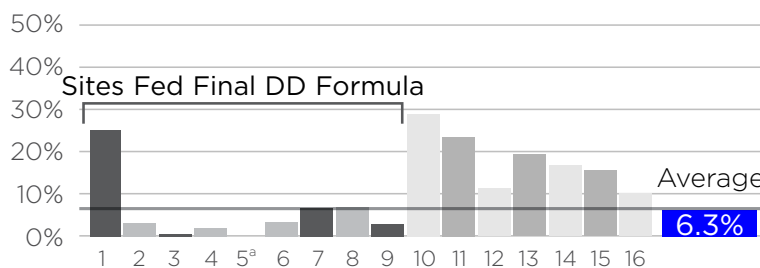

Day 1

Day 80
-45.4%

Day 150
-65.0%

Day 150
-80.9%

^a Heifers not available for 150 d evaluation as they were put out on pasture in late April
